

STERISAFE STRATOS

Cloud based validation of your disinfection process

STRATOS user packages

- Disinfection cycle overview and history
- Interactive map & device location
- Detailed & automatic reporting
- Disinfection report download

Tracking of historical data

Disinfection validation

Data analytics

Multi-site management

Real-time data

VALUABLE DATA,
REPORTING &
COMPLIANCE

OPERATIONAL DATA SENT
DIRECTLY TO THE STRATOS
CLOUD

ADVANCED AUTOMATED
ROOM DISINFECTING &
MONITORING

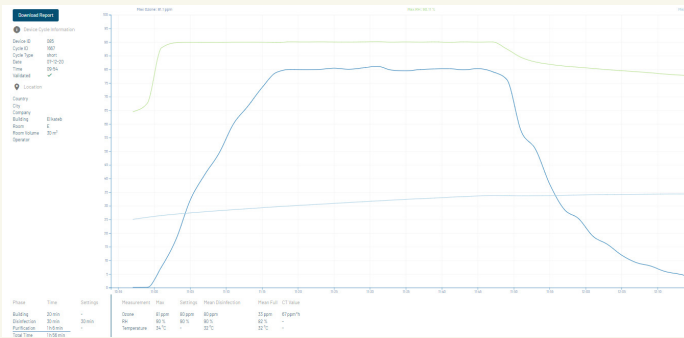

Centralized control and data

STERISAFE STRATOS is the brand new cloud solution for disinfection professionals and is compatible with STERISAFE PRO and other STERISAFE products.

With STERISAFE STRATOS, infection control professionals now have the power to centralize disinfection procedures, reports and validations in one place.

STERISAFE STRATOS makes the handling of manual paperwork obsolete, by taking procedures onto an automated and cloud based reporting system. STERISAFE STRATOS is the next generation of disinfection and brings automation, validation, real-time data and data analytics together.

Combining disinfection with automation

The combination of STERISAFE's Full Depth Disinfection Cycle (FDDC) and STERISAFE STRATOS is a unique solution that transforms the way infection control protocols can be conducted and validated.

The FDDC technology as the base of all current STERISAFE products is the only technology that allows for full monitoring of disinfection processes.

Other technologies have technical barriers to homogeneously disperse biocides to all surfaces and to monitor the decisive parameters of the disinfection process. The combination of the unique FDDC technology and the data analytics behind STRATOS makes this platform the first solution that can provide peace of mind to hygiene professionals by automatically validating the biological effectiveness of the disinfection process.

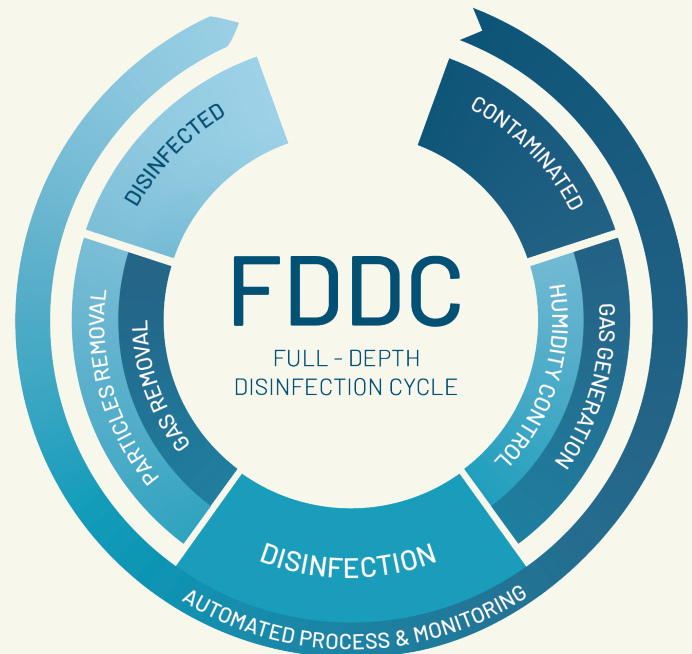

Once an automated disinfection cycle has been completed, a validation report is generated and sent to STRATOS from where the user can download a disinfection report that guarantees the rooms safety based on applied hygiene standards.

INFO BOX

Gain security and overview of your processes with STERISAFE STRATOS

- Process security
- Better compliance
- Full transparency
- Validation of biological effectiveness
- Peace of mind
- Full transparency
- Full disinfection history
- Tracing outbreaks

By monitoring the entire disinfecting process, the system can automatically validate if the decisive parameters for sufficient disinfection have been met. STRATOS processes this information and keeps record of all your STERISAFE products and disinfection data. This allows for flawless infection control protocols without room for human error. All the data is 100% based on communication between STRATOS and your other STERISAFE products.

- **No lazy gas - FDDC ensures homogenous distribution of biocide to all cracks and corners of the room**
- **Disinfection cycle validation and reporting regardless of room architecture.**
